

Cyber and Dark Web Intelligence

Protect your reputation by discovering stolen data quickly, revealing threats or vulnerabilities from insiders and detecting your brand on the dark web.

The cost of security breaches and cyber attacks ranges in the hundreds of billions worldwide. The cost of reputation damage is immeasurable. Sensitive data breaches, malware, online identity and financial information theft are just some of the events targeting small and large companies all over the world.

When cyber criminals communicate, exchange or release data, they rarely use the surface web or social media. The early signs of cyber attacks can be traced back to masked communications in an area of the Deep Web known as the Dark Web.

Your data is valuable

While the threat to larger organisations is distinct, small businesses are now firmly being targeted. In a 2015 UK survey 74% of small organisations reported a cyber security breach within the previous 12 months. Almost every organisation holds some valuable data, whether it's customer credit card numbers or employee files.

About NYA

NYA International is a global risk and crisis management consultancy with offices in New York, London and Singapore. Since 1990 we have helped clients to operate successfully in complex environments around the world.

We help our clients to understand the threats and vulnerabilities to their people, assets and operations, improve their resilience and effectively mitigate and manage a wide range of security-related problems and crises.

NYA's Cyber and Dark Web Intelligence services support a variety of applications from horizon scanning to searching for a single social media post. Our end-to-end monitoring service observes social media, the surface and deep web, and is broken down to three logical stages:

Search

Analysts in our 24/7 Operations Centre select the most appropriate data sources, search terms, advanced search algorithms and geofenced areas to capture what matters to you.

Analysis

Captured data is visualised to show key words used, traffic behaviour, sentiment analysis and origin locations. We combine this data with our expert knowledge of data breaches and cyber criminals to give you the most reliable assessments.

Reporting and alerts

Our analyst team produces and delivers clear and concise reports or alerts with actionable insights, enabling you to make quick and informed decisions to protect your data.
